01

Project Overview

Goal: Design a friendly and smart chatbot to help users track lost packages, get delivery updates, or file a claim.

Scenario Chosen: Tracking a lost package

Tools Used:

- Python (Command-line interface)
- HTML/CSS/JavaScript (Web interface)

Package Tracking Assistant

 Please enter your tracking number (e.g., TRK123456).
If you don't know it, just type 'I don't know'.

TRK123456

  Tracking TRK123456 status: In Transit

  Your package is currently in transit.

 Last scanned in Chicago distribution center.
Estimated delivery: April 7th.

 What would you like to do next?

1. File a claim
2. Get email updates
3. Talk to a human agent
4. View delivery details

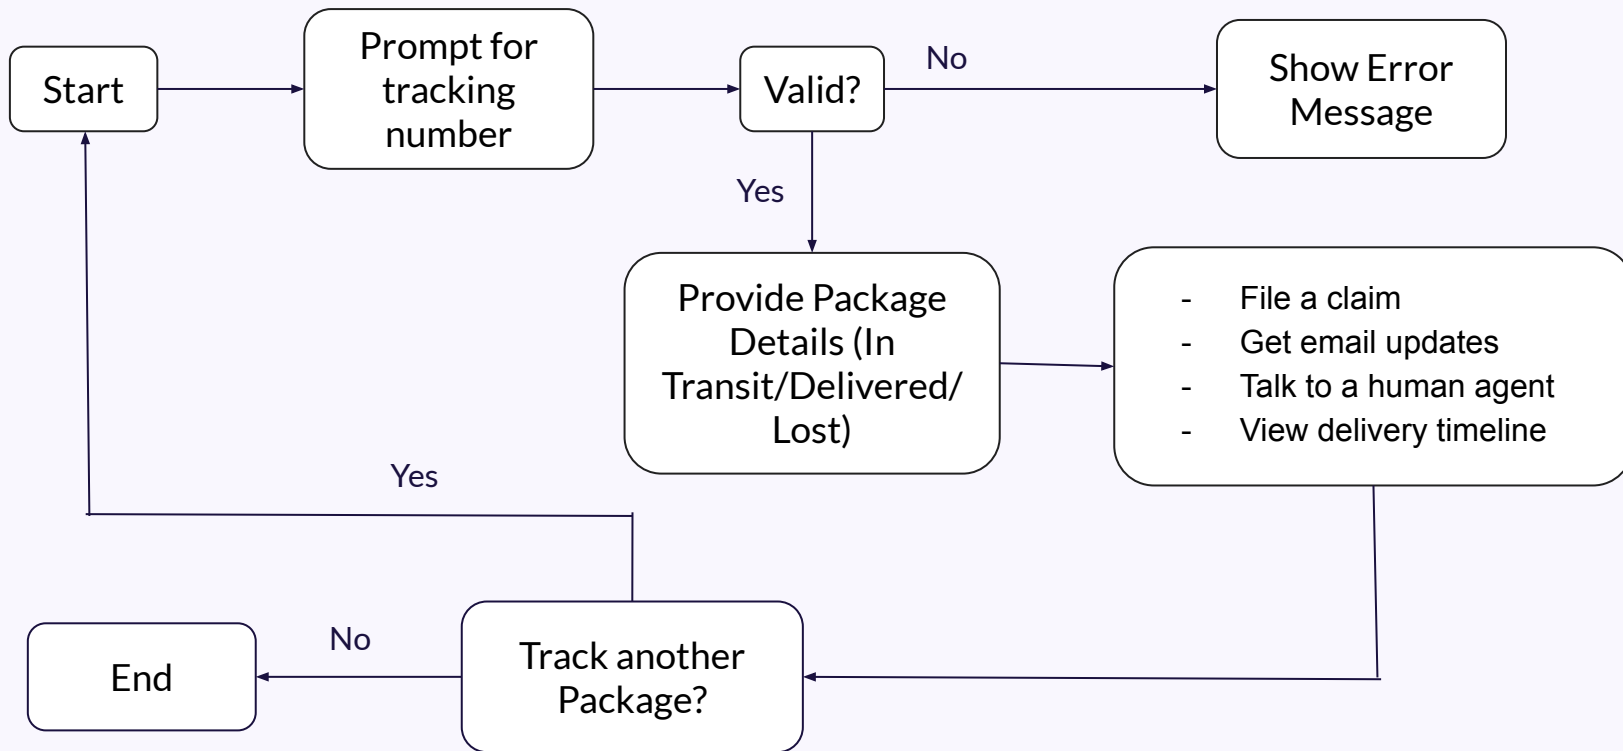

Send

Conversation Flow

03 Features & Highlights

Functionalities:

- Tracks packages via tracking number or email/order ID
- Simulates package delivery statuses (In Transit, Delivered, Lost)
- Allows users to:
 - File a claim
 - Get email updates
 - Talk to a human agent
 - View delivery timeline

UI Features:

- Dark/Light mode toggle
- Animated typing indicator
- Bot icon and smooth chat layout
- Error handling for invalid tracking numbers or emails

04 Technical Implementation

Command-Line Chatbot (Python)

- Simulates real-world package statuses
- Validates tracking numbers & email inputs
- Delivers step-by-step conversational experience
- Typing effect, random status generator, timeline display

Web-Based Chatbot (JS/HTML/CSS)

- Uses JavaScript for flow logic and DOM updates
- CSS animations, theming, and responsive design
- Enter key handling, restart flow, and state-based conversation

```
(base) khushi@MacBook-Air-4 chatbot % python3 chatbot.py

=====
👋 Hi! I'm your package assistant bot.
📦 I can help you track your package or assist with delivery issues.
💡 You can type 'bye' or 'exit' anytime to end the chat.
=====

🔍 Please enter your tracking number (e.g., TRK123456): TRK123456
📦 Thank you! Let me look up information for TRK123456...
📦 📦 Tracking TRK123456 status: Lost
📦 😞 We're having trouble locating your package.
📦 Our team is investigating. You can file a claim for compensation.

What would you like to do next?
1. File a claim
2. Get email updates
3. Talk to a human agent
4. View delivery details

Type 1, 2, 3, or 4: █
```

Challenges & Improvements

Challenges Faced:

- Designing realistic, user-friendly flow
- Balancing logic and conversational tone
- Avoiding overwhelming users with too many messages

Future Improvements:

- Integrate with real tracking APIs (e.g., UPS, FedEx)
- Use NLP to interpret open-ended queries
- Add backend support for session persistence
- Deploy the web app publicly (e.g., Netlify)
